## Personal Profile

I am a recent BSc Computer Science graduate from Lancaster University who is passionate about AI and looking for a role as a software engineer, full-stack engineer or AI engineer.

During my time at University, I started working on my startup, Sonimarto, which automates market research for products. I have also enhanced my skills through additional courses on Codecademy. If you are curious to see my work in action then you can visit my website, which includes showcases of my latest projects.

## Projects

### **Sonimarto — CEO, Full stack engineer & Sole Developer | [sonimarto.com](https://sonimarto.com)**

Designed, built, deployed and operate a production SaaS and web platform that combines AI agents with web scrapers to provide detailed information about products. The site displays listing links, pricing statistics, description, general information, etc. Also, the site assists buyers in making purchasing decisions by comparing different products and saves time for sellers by automatically generating prefilled information for them to use when listing the products.

- Deployed a multi-marketplace resale intelligence platform: Python/FastAPI backend, JS front end, 20+ third party APIs, Stripe billing, Docker/nginx deployment.
- Created 8 AI agents that process text or images using multiple LLM providers such as DeepSeek.
- Built a statistical price valuation engine with accuracy-penalised matching, regex and fee modelling to generate accurate price estimates.
- Created a Docker deployment of 5 application workers behind nginx load balancing, with Redis, health checks, auto-restart and rate limits.
- Continuously listened to and acted on feedback from users by displaying the information that they were looking for, optimizing the product processing workflow for time efficiency, and improving the visuals of the site.
- After researching and studying UI/UX, I designed and continuously improved the look and feel of the site, blending the aesthetics of e-commerce, search-engine and SaaS into a calm, navigation-light interface.
- Created an admin dashboard that shows information collected from cookie-free analytics of Sonimarto site.

## **Efficient and Scalable UIO Sequence Generation for Deterministic Finite State Machines – Third Year Project at University**

- Designed and implemented 14 novel algorithms for constructing Unique Input/Output (UIO) sequences in deterministic Finite State Machines, achieving up to 5× speedup over baseline methods on large FSMs (2,500+ states) and wrote a 12000-word report on the project.
- Developed multiple algorithm that leveraged vectorised NumPy/PyTorch operations to eliminate interpreter overhead and enable batch chromosome evaluation across thousands of states simultaneously.
- Engineered parallel (multithreaded) variants of all algorithms using thread pools, shared work queues, lock-based synchronisation and CUDA to exploit multi-core CPU architectures.
- Conducted a comprehensive empirical study across 245 FSMs (up to 15,000 states, 1,000 inputs/outputs), evaluating scalability with respect to states, inputs, and outputs independently.

## **Technical Skills**

**Project Frameworks & Methodologies:** Familiar with team and project management methodologies including Agile, Scrum, Waterfall, UCD, and Extreme Programming.

**Operating Systems:** Experienced with both Windows and Linux platforms.

**Coding Development Practices:** Strong understanding of design patterns, SOLID principles, object-oriented programming. Capable of writing clean, maintainable code.

**Programming Languages:** Competent in Python, Java, C, HTML, CSS, JavaScript, PHP, JavaScript, SQL, erlang, Assembly language, MATLAB.

**Developmental Tools & Software:** Experienced with GitHub, Microsoft Excel, GIMP, and Blender

**Office Tools:** Skilled in PowerPoint, Word, and Teams. Typing speed of 71wpm.

## **Transferable Skills**

- **Teamwork:** Collaborated on a six-month university team project to successfully design and implement a presentation application that is similar to PowerPoint. Applied strong communication and management skills to effectively contribute in both leadership and supportive roles.
- **Avid & Fast Learner:** Enjoy learning new things and always trying to improve my skills and knowledge.
- **Good active listener:** As a brand representative, I honed my active listening skills I can address their concerns effectively and with care.

- **Bilingual:** Can speak English natively and Arabic to an almost native level.
- **Sales and Negotiation:** Experience in face-to-face promotion by building trust, appeal and confidently recommending products to meet targets.
- **General fitness:** I regularly practice Brazillian Jiu Jitsu, which has built my stamina and given me the ability to handle strenuous physical activity.

## **Work Experience**

### **Brand Representative, Citrus Organisation Limited:**

- Promoted a government-funded cavity wall insulation scheme through direct, face-to-face engagement, requiring high levels of resilience and self-motivation.
- Utilised active listening and conversational skills to rapidly build rapport and establish trust with members of the public from diverse backgrounds, ages, and personalities.
- Translated complex scheme details into clear, accessible language, tailoring the communication style to each individual to maximise engagement.
- Developed strong persuasion, negotiation, and target-driven skills, consistently adapting my approach to overcome objections and achieve promotional goals.
